

Prevent Snow Slide Risks on Standing Seam Roofs

THE CHALLENGE

Standing Seam roofs are built for long-term reliability—offering exceptional durability, extreme weather resistance, and sleek design. However, their smooth, slick surface create a critical liability: sudden, dangerous snow slides.

THE SOLUTION: ALPINE SNOWGUARDS ASG4000G

Purpose-engineered for standing seam roofs, the ASG4000G is a durable barricade system engineered to hold the snow mass in place until it sheds gradually, offering superior protection in high snow load areas.

ASG4000G STANDING SEAM PIPE-STYLE SNOW GUARD

Secure Strength

Remain worry-free during harsh winters. Our versatile clamp securely attaches to a wide range of metal standing seam profiles, including larger single lock, bulb and tee seam profiles, to deliver reliable, heavy-duty snow retention.

Investment Safety

Protect your investment. The ASG4000G-BR matches the material value and longevity of your copper standing seam roof, mitigating the risk of galvanic corrosion and ensuring the safety of your property for decades to come.

Warranty Protection

Protect your roof's warranty. Oval-point set screws securely attach to the seam without piercing the metal, ensuring your roof's warranty remains intact.

Buildable Retention

Customize your protection level. Add ice flags to prevent smaller chunks of ice from sliding under the pipes in areas that need additional protection
