

Prevent Snow Slide Risks on Standing Seam Roofs

THE CHALLENGE

Standing Seam roofs are built for long-term reliability—offering exceptional durability, extreme weather resistance, and sleek design. However, their smooth, slick surface create a critical liability: sudden, dangerous snow slides.

THE SOLUTION: ALPINE SNOWGUARDS ASG4025

Purpose-engineered for standing seam roofs, the ASG4025 is a durable barricade system engineered to hold the snow mass in place until it sheds gradually, offering superior protection in high snow load areas.

ASG4025 PIPE-STYLE SNOW GUARD

Superior Strength Warranty Protection

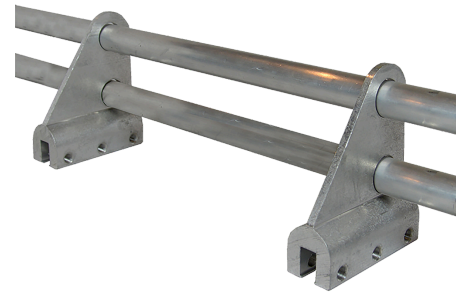

Take on whatever winter throws your way. The ASG4025 clamp is forged from a solid block of recycled aluminum for superior strength.

Protect your roof's warranty. Oval-point set screws securely attach to the seam without piercing the metal, ensuring your roof's warranty remains intact.

Secure Safety Buildable Retention

Remain worry-free during harsh winters. The ASG4025 solid aluminum construction is double the standard thickness to reduce twisting, allowing it to retain twice its height of snow.

Customize your protection level. Add ice flags to prevent smaller chunks of ice from sliding under the pipes in areas that need additional protection.
