

Prevent Snow Slide Risks on Premium Natural Slate Roofs

THE CHALLENGE

Natural slate roofs offer unmatched durability and extreme weather resistance, lasting 75 to 100+ years. However, temperature shifts can cause large sheets of snow to suddenly release, creating a critical liability: sudden, dangerous snow slides.

THE SOLUTION: ALPINE SNOWGUARDS PP225

Purpose-engineered for natural slate, the PP225 is a durable barricade system engineered to hold the snow mass in place until it sheds gradually, offering superior protection in high snow load areas.

PP225 PIPE-STYLE SNOW GUARD

Built-in Adaptability

Enjoy ultimate flexibility on-site. Easily adjust the bracket by up to 39° to match various roof pitches, with no complex re-engineering required.

Buildable Retention

Customize your protection level. Add ice flags or an ice screen to prevent smaller chunks of ice from sliding under the pipes in areas that need additional protection.

Watertight Security

Protect your roofs integrity. The custom baseplate anchors directly into the roof deck completely replacing a shingle, preserving structural strength and a watertight barrier.

Lifelong Durability

Your snow retention should be as durable as your roof. Our design delivers optimal strength in material options that withstand intense environmental exposure.

PP225 | Aluminum
